SPINDLE MOUNT KITS

MW's floating brake rotor solves the installation problems associated with fixed rotor kits. Mark Williams now offers several kits that are direct bolt-on to aftermarket style front struts. Also included are kits designed for MW Anglia/P&S style front spindles, plus the Strange adjustable Dragster/FC spindle.

All kits feature designs that use a solid mounted billet aluminum two piston caliper, billet aluminum rotor adapter, and unique, patented, USP 6,988,598 B2, floating brake rotor (available in steel or carbon fiber). With this design, run-out on the back of the wheel is not critical. Please note that your MW dragster spindles must be sent to the factory for bracket installation or are available new with the mounting tabs installed.
